

Yesterday

Painstakingly assemble and prepare all objects in advance, retouching, resampling, and resizing images, converting colors, modifying advertisements so they match your press profile and running the risk of different colors and customer dissatisfaction.

Today... Freely design your page... and get the right ColorSpace and resolution PDF/X4!

- ✓ freely import any advertisement still set to the color space it was designed in,
- ✓ freely import RGB images as they arrive from a digital camera, without any preprocessing,
- ✓ freely use any part of an image, freely resize it, freely position it,
- ✓ freely use any special effects offered by your page layout software including transparencies.
